The limits that actually matter

Suno doesn't enforce hard caps in the UI, but these are the ceilings where the output stays coherent. Cross them and the model averages everything into mush.

3

GENRES

More genres = the model averages \square mush. Pick 2-5 sub-genres that point the same direction.

4

MOODS

Synonyms compound (sad + melancholic = sadder). Pick distinct emotional axes instead.

6

INSTRUMENTS

Suno mixes what you list. Six is the ceiling before instruments start fighting in the mix.

2

VOICES

One lead, one harmony — that's it. Three vocal tags and the model picks the first two anyway.

2

PRODUCTION TAGS

Each adds a sonic signature. Two stacks; three muddles. "Tape saturation + warm mix" is a duo, not a trio.

BRAHMSTORM

GENRE

Lo-fi

"Lo-fi" alone is the most disappointing tag on Suno. These four prompts add the texture that makes it actually feel lo-fi.
